Sample Questions and Answer Key Explanations

Example 1: Triangle Congruence

Question: Given two triangles with two pairs of congruent sides and the included angle congruent, determine if they are congruent by SAS postulate.

Answer: If two triangles have two pairs of sides congruent and the included angles between those sides are congruent, then by the SAS (Side-Angle-Side) postulate, the triangles are congruent.

Explanation: The SAS postulate states that if two sides and the included angle of one triangle are congruent to the corresponding parts of

another triangle, then the triangles are congruent. Use the answer key to verify if the given data matches the criteria for SAS congruence.

Example 2: Circle Theorem

Question: In a circle, an inscribed angle intercepts a 100° arc. What is the measure of the inscribed angle?

Answer: The measure of the inscribed angle is half the measure of the intercepted arc, so it is 50° .

Explanation: The inscribed angle theorem states that an inscribed angle measures half the measure of its intercepted arc. The answer key confirms that students should divide 100° by 2 to find the angle measure.
